UNITED STATES PATENT OFFICE.

GEORGE ALFRED SQUIRE, OF BAYONNE, NEW JERSEY.

DESIGN FOR ORNAMENTATION OF A SEWING-MACHINE.

SPECIFICATION forming part of Design No. 15,221, dated August 5, 1884.

Application filed May 31, 1884. Term of patent 14 years.

To all whom it may concern:

Be it known that I, GEORGE ALFRED SQUIRE, a citizen of the United States, residing at Bayonne, in the county of Hudson and State of New Jersey, have invented and produced a new and original Design for the Ornamentation of Sewing-Machines, of which the following is a specification.

In the accompanying illustrations, Figures 1 and 2 are opposite views in perspective of a sewing-machine plate and arm ornamented with my new designs. Figs. 3 and 3^a (one of which is a reversal or negative of the other) show the ornamentations for the sides of the cloth-plate, and Fig. 4 the ornamentation for the central part of the same. Figs. 5 and 6 show the main ornaments for the opposite sides of the arm; and Figs. 7, 8, and 9 the ornaments for the front, rear, and outer sides of the upright part or post of the arm. Fig. 10 is the ornamental lettering for the upper side of the arm; and Figs. 11, 11^a, 11^b, 11^c, and 11^d, (which are all alike,) are small ornaments for the opposite sides of the forward end of the arm, for the upper side thereof, and for the inner side of the post.

My new designs all have a general resemblance to each other, in that they are composed of branches or sprays of a trailing vine having pointed and wheel-form leaves, wheel-form flowers, tendrils, and berries. The stems, leaves, flowers, tendrils, and berries are differently grouped together in the different figures, which will therefore be termed "groups."

Groups A are the ornaments for the sides of the cloth-plate, and are curved and recurved to conform somewhat to the contour of the said plate. While most of the flowers in these groups are wheel-form, a few of them are four-petaled or cruciform.

Group B is the ornament for the center of the cloth-plate, and is somewhat spread out. At one side it is a separate branch, having only berries and pointed leaves.

Group C is the main ornament for the side of the arm, and contains two wheel-form and one cruciform flowers. A slender branch, bearing only berries and pointed leaves, extends through a word—in this case the word "Singer"—near the forward end of the group.

Group D is the main ornament for the rear side of the arm, said group being curved, so

that one portion thereof is nearly at right angles to the other portion, the forward part of the group being a slender branch, bearing only berries and pointed leaves, extends through a word—in this case the word "Singer"—near the forward end of the group.

Group E is the ornament for the front side of the post of the arm, and is curved to form a wreath adapted to surround the trade-mark.

Group F, which is the ornament for the rear side of the post, is somewhat spread out, and contains, near its base, a drooping branch bearing only berries and pointed leaves.

Group G is for the face-plate, and is narrow and upright, with two pairs of wheel-form leaves and flowers.

Group H is the ornamental lettering for the top of the arm, and consists of words in German-text letters.

Groups I, (of which there are five, all alike,) each contains two pairs of wheel-form leaves and flowers with the tendrils, berries, and pointed leaves, which characterize the other groups. These groups I are for the ornamentation of the upper side of the arm, the opposite vertical sides of the forward part of the same, and the inside of the post.

I claim—

1. The design for the ornamentation of sewing-machines, consisting of group A, substantially as shown.

2. The design for the ornamentation of sewing-machines, consisting of group B, substantially as shown.

3. The design for the ornamentation of sewing-machines, consisting of group C, substantially as shown.

4. The design for the ornamentation of sewing-machines, consisting of group D, substantially as shown.

5. The design for the ornamentation of sewing-machines, consisting of group E, substantially as shown.

6. The design for the ornamentation of sewing-machines, consisting of group F, substantially as shown.

7. The design for the ornamentation of sewing-machines, consisting of group G, substantially as shown.

8. The design for the ornamentation of sewing-machines, consisting of group I, substantially as shown.

9. The design for the ornamentation of sewing-machines, consisting of the combination of groups A and B, substantially as shown.
10. The design for the ornamentation of sewing-machines, consisting of the combination of groups C and I, substantially as shown.
11. The design for the ornamentation of sewing-machines, consisting of the combination of groups C and E, substantially as shown.
12. The design for the ornamentation of sewing-machines, consisting of the combination of groups C, E, and I, substantially as shown.
13. The design for the ornamentation of sewing-machines, consisting of the combination of groups D and I, substantially as shown.
14. The design for the ornamentation of sewing-machines, consisting of the combination of groups D and F, substantially as shown.

15. The design for the ornamentation of sewing-machines, consisting of the combination of groups D, F, and I, substantially as shown.

16. The design for the ornamentation of sewing-machines, consisting of the combination of groups C, D, E, F, G, and I, substantially as shown.

17. The design for the ornamentation of sewing-machines, consisting of the combination of groups A, B, C, D, E, F, G, and I, substantially as shown.

In testimony whereof I affix my signature in presence of two witnesses.

GEORGE ALFRED SQUIRE.
